The high-impedance state and increased high-logic level drive provide these registers with the capability of being connected directly to and driving the bus. The SNx4LS24x and SNx4S24x devices can be used as inverting and non-inverting bus buffers for data line transmission and can isolate input to output by setting the G pin HIGH. General Description These bit registers feature totem-pole STATE outputs designed specifically for driving highly-capacitive or relatively low-impedance loads. TI's SN74LS is ach, V to V bipolar buffers with state outputs.
