The purpose of the present paper is to propose a definition of effective calculability which is thought to correspond satisfactorily to the somewhat vague intuitive notion in terms of which problems of this class are often stated, and to show, by means of an example, that not every problem of this class necessaey in §in order to carey over its results to the calculus of A-c5-conversion. A complete incorporation of the calculus of A-conversion into the theory of types is impossible if we require that Ax and juxtaposition shall retain their introduction to mathematical logic.
