The standard is recognized by equipment ASHRAE Standard gives a method for determining the amount of refrigerant in a given space that, when exceeded, requires a machinery room. Standard is designed to accommodate the use of A2L-classified refrigerants in low-rise residential Occupied Space", in Table of Standard states: "The refrigerant safety groups in Table are not part of ASHRAE Standard The classifications shown are from ASHRAE Standard, which governs in the event of a difference." The next revision of Standard will include RCL values in Table 1; model and local codes are also making the change Although changes to Standard are closely coordinated with those to Standard, users of Standards should also review the most recent version of Standard and its associated addenda for the latest information related to refrigerant designations and safety classifications. ASHRAE Standard gives a method for ANSI/ASHRAE Standard, Safety Standard for Refrigeration Systems in Residential Applications (ANSI Approved) ASHRAE Standard is the low-rise residential refrigeration safety standard that all stakeholders can depend on. When a refrigerant is not classified ASHRAE Standards and Guidelines are established to assist industry and the public by offering a uniform method of testing for rating purposes, by suggesting safe practices in ASHRAE Together, they add up to safer refrigeration systems. This guide also covers building, system, and refrigerant classifications, restrictions on refrigerant use, installation restrictions, and equipment and system design and The ASHRAE Standard provides safeguards for life, limb, health, property, and prescribes safety requirements. The standard is recognized by equipment manufacturers, engineers, and contractors as the main guide for personal safety involving refrigeration systems applying this standard. Standard, Calorimeter Test Methods for Mass Flow Measurements of Volatile Refrigerants The ASHRAE Standard provides safeguards for life, limb, health, property, and prescribes safety requirements. Standard describes a shorthand way of naming refrigerants and assigns safety classifications Standard (RA), Standard Methods for Laboratory Airflow Measurement (PDF is not searchable) Standard (RA), Standard Method for Measurement for Moist Air Properties.
