The ATTC consists of items that are rated on a four-point likert scale from (almost never) to (always). Attentional Control Scale (ACS): ACS is a self-report item questionnaire rated on a point Likert scale (1 = almost never to = always) that assesses attentional control and attentional shifting. The Attentional Control Scale (ACS) measures the ability to focus attention, switch attention between tasks, and flexibly control thoughts through subjective measures, for example "It's very The Attentional Control Scale for Children (ACS-C) is a widely used self-report questionnaire that measures attentional control in youth. See more The Attention Control Scale (ACS) appears to be a reliable, valid self-report measure of attentional control. The Attention Control Scale (ATTC) is a self-reportscale that is designed to measure two major components of attention (attention focusing and attention shifting). Previous research examined factor-structure and validation of the ACS-C and yielded a factor structure with Attentional Focusing and Attentional Shifting subscales. It is a self-reported questionnaire conceived to measure two functions of the attentional system: focusing (the ability to maintain attention while inhibiting attentional distractors) and shifting (the ability to move attention from one task to another). It is a widely used scale due to its clinical and heuristic utility. Tags: Attentional Control Scale (ACS): ACS is a self-report item questionnaire rated on a point Likert scale (1 = almost never to = always) that assesses attentional control and The Attentional Control Scale (ACS; Derryberry & Reed,) has been used to assess executive control over attention in numerous studies, but no published data have. It is a self-reported questionnaire conceived to measure two functions of the attentional system: focusing (the ability to maintain attention while inhibiting attentional) and shifting (the ability to move attention from one task to another). The Attention Control Scale (ATTC) is a self-reportscale that is designed to measure two major components of attention (attention focusing and attention shifting). The ATTC consists of items that are rated on a four-point likert scale from (almost never) to (always).
