® The total score indicates your general cognitive level of functioning. The scores from each domain are usually combined to The Brief Cognitive Assessment Tool (BCAT) assesses various cognitive domains to provide valuable insights into an individual's cognitive functioning. Mansbach Health Tools, LLC is not responsible for formal diagnoses or treatments. Scores range from to Item-level scores are determined by correct responses. Interpretation considerations: Standardized scores: BCAT results are often expressed as standardized scores, which compare an individual's performance to a normative sample of people of similar age and education level Can be downloaded and used Scoring: Each task within the BCAT is scored individually, with points awarded based on accuracy and performance. The BCAT® will indicate a specific stage of cognitive functioning. Follow the scoring guide below to interpret the results: Section Orientation (4 points) point for correctly stating the current date The specific scoring methods and cutoff scores can vary depending on the version of the BCAT used. The BCAT consists of items. All results are based on statistical probabilities, not certainties. Can be downloaded and used as a paper-and-pencil instrument, but it Brief Cognitive Assessment Tool (BCAT) Scoring Guide The Brief Cognitive Assessment Tool (BCAT) assesses various cognitive domains to provide valuable insights into an individual's cognitive functioning. BCAT® Test System Crosswalk to Pain Scales. Follow the scoring BCAT cut scores for identifying MCI and dementia have demonstrated excellent sensitivity (MCI =, dementia =), specificity (MCI =, dementia =), positive These results are based on the inputting of BCAT®-SF item scores. There are score ranges for normal, Mild Cognitive Key Descriptions. This crosswalk can be used by clinicians of all disciplines to determine which pain scale can most reliably report patient pain Produces a total score to assess global cognitive functioning, Contextual Memory Factor (CMF), and Executive Control Functions Factor (ECFF). The conclusions reported are the result of statistical analyses from data collected from psychometric research. Produces a total score to assess global cognitive functioning, Contextual Memory Factor (CMF), and Executive Control Functions Factor (ECFF). This score will provide an indication of where your general cognitive functioning is in terms of a continuum between "normal" and "dementia."
