BECKHOFF EL, ELBus Terminals with fail-safe inputs or outputs. The Beckhoff Bus Terminal system components are mainly used in industrial automation and building management applications. The EL and EL Bus Terminals enable connection of common safety sensors and actuators. With two-channel connection, the EL meets the requirements of IEC SIL 3, EN ISO (Cat 4, PL e), NRTL EL Version System description. The Beckhoff Bus Terminal system The Beckhoff Bus Terminal system is used for centralized connection of sensors and actuators to a control system.
