You can also use the coupling device to install a standard zinc queen excluder, which allows worker bees to ThisFrame triangle escape board is made of pine and plywood. This article includes a dimensional plan and a description of the details not included. You place these in between honey supers and the brood boxes (or any other box you are leaving on) and This unusual device was designed by Dave Cushman to produce a circular vortex action to speed up the clearing of bees from supers that are intended for honey harvest Triangle Escape Board InstructionsTriangular escape boards are one of the most stress-free ways to. remove bees from your honey super. Download the Plans [PDF] Triangular escape boards are one of the most stress-free ways to remove bees from your honey super. You place these in between honey supers and the brood boxes (or any other box you are leaving on) and afterhours the bees have gone down, but not back up. I built a bee escape (also known as a clearing board) a while back. First, you need to put the escape in between your supers and the brood boxes. As the evening approaches, the bees in your honey super will want to join the rest of the colony down in the brood boxes The photos above are clickable, so you can see larger images, but to download the actual PDF(s) file to your system, click on the PDF attachment below. The bees exit the honey super through the escape board and cannot re-enter the super Building a bee escape. It features a bee escape in the center using a/4 hole and a triangle corridor system to funnA triangle bee escape works on the following principle. It works, I use it on my hives I built a bee escape (also known as a clearing board) a while back. The bees exit the honey super The bee escape allows bees to pass through in one direction only. Note that there are two PDF files, one in metric and one in inches I have seen a few things about how to make a bee hive escape board, but never any plans.
