Children's Hospital of Philadelphia Infant Test of Neuromuscular Disorders (CHOP INTEND) A point motor assessment that captures neck, trunk, The CHOP INTEND is a validated instrument to assess the motor ability of non-ambulant children. It includes both active movements, spontaneous or goal orientated items and of reflexive Test development. It includedestest items that assess spontaneous and elicited movements of the upper and lower extremities, trunk, neck, and head. The CHOP INTEND (Children's Hospital Of Philadelphia Infant Test Of Neuromuscular Disorders) is a scale initially validated for the assessment of children What has been reported as the usual score for an infant with SMA Typewithout drug treatment over time? Scores range fromtoorfor each item, with higher numbers indicating better motor function. Unlike other assessment tools, CHOP INTEND was developed CHOP INTEND. The CHOP INTEND. CHOP-INTEND is a validated item scale with a score range of- It was developed in part from the Test of Infant Motor Performance (TIMP) and was designed to capture In conclusion, the CHOP INTEND is a reliable, easily administered and well tolerated motor test measure for SMA-I and similarly weak infants with neuromuscular disease. The assessment is administered while the infant is in Development of the CHOP INTEND was performed in three parts. In the first part, we designed several new test items to capture specific targeted motor skills that are clinically significant for the SMA-I population and developmentally appropriate for infants, but where no items existed in the TIMP or The Peabody Developmental Motor Scales II to reflect those skills CHOP INTEND スコアシート Children 's Hospital of Philadelphia Infant Test of Neuromuscular Disorders NPPV : 非侵襲的陽圧換気療法、TPPV : 気管切開下陽圧換気療法 項目 開始姿勢 手順 採点基準 点数自発運動 (上肢) 背臥位 テスト全体を通じて観察する 反応を引き出すために、 This document contains the CHOP INTEND assessment tool used to evaluate the motor abilities of infants. Please refer to the Manual of Procedures for full instructions on how to administer the CHOP INTEND. Completed Score Sheets should be stored with the patient's medical notes Measurement framework: CHOP-INTEND is a validated item scale with a score range of- It was developed in part from the Test of Infant Motor Performance (TIMP) and was designed to capture motor function in weak infants with neuromuscular disease.
