= () f. = f. (+. = f. Derivatives. If. y. ' f. Title: Calculus_Cheat_Sheet_All Author: ptdaw Created Date/9/AM Calculus Cheat Sheet. If. y. Derivatives. ' (x.) then all of the following are h.) -. (+. Definition and Notation. (x.) = limh. f x. h.) -. = () f. →h. f x. (x.) then all For example, the derivative of $xx^2 + 5x$ is $xx + 5$ Finding derivatives of polynomials is so easy all you have to do is write down the answer, but here are the Arc Trigonometric Derivatives: $(\arcsin()) = \sqrt{1-(\arccos())} = -\sqrt{1-}$ f x. If. y. f. (x.) = limh. (x.) then the derivative is defined to be. →h. (x.) then the derivative is defined to be. If. y. f x. $(\arctan()) =$ 'Derivative: $(x)=n-1$ ' Derivative: $'(x)=v(tx^3-yx)(xx^2-y)$ You will often use these root, exponent and fraction properties to simplify before finding the derivative Title: Calculus_Cheat_Sheet_All Author: ptdaw Created Date/9/AM Calculus Cheat Sheet. Definition and Notation.
