Calculates minimum required wall thickness for the given conditions, such as varying depth. Individual selection of safety class and assumptions regarding corrosion One input and result sheet showing all necessary information. You need to enable JavaScript to run this app A statement shall be submitted showing the capacity of all mooring bollards, winches and other attachments to be used for the load-out Compatibility between quay strength and elasticity, and the support conditions used for analysis of the structure, shall be demonstrated where appropriate DNV Det Norske Veritas DP Dynamic Positioning DPO Dynamic Positioning Operator (As defined by IMCA, MTS etc.) DSA Danish Shipowners' Association DSV Diving Support Vessel ERRV Emergency Response & Rescue Vessel ERRVA Emergency Response & Rescue Vessel Owners' Association ETA Estimated/Expected Time of Arrival ETD This standard (ST) provides design requirements and guidelines to be used for the determination of loads and site conditions for onshore and offshore wind turbines. The objective of this standard is to: Specify requirements, principles, and guidelines for the assessment of site conditions and the establishment of loads on wind turbines Key benefits of DNV-ST-F Code Compliance. Calculates utilization based on wall thickness given by the user.

 Difficulté Facile
