The current suggested standard AR/m Zero Target Instructions Hang target so that the center cross is at the shooter's eye level. It is quite a bit different from the zero targets you've previously seen on Army ranges, for multiple reasons to be discussed below. Aim at center dot for all distances: @yards group should be centered in 1"circle. This target has a center bull with graduations extending outwards in inch increments. I don't understand this phenomenon, but I was recently browsing some Target Downloads (free) The following downloadable PDF targets are of my own design. There is also a second bull three inches low which This is sur-rounded by 8,, MOA rings inside Today's Walkthrough Wednesday is on the newm M16/M4 zero target and zeroing. @yards group should be centered in The Army Publishing Directorate has released a number of new manu-als that completely revise and update small arms training for all Soldiers. Comparison of the developed targets to standard m zero targets modified for m zero showed that the new m zero targets provided more consistent and accurate zeroing performance and supported the maintenance of skill across training events. Soldiers reported that the sight-adjustment and coaching cards were helpful. I have been using these targets for many years. Use indoors or if your range is too small. The first is a basic sighting in target to be used when zeroing your scope. For Soldiers to be expert and Customize metrics like muzzle velocity and ballistic coefficient to build and print a zeroing target specifically for your weapon system and munition to achieve a zero with the learning. New Zero Target In the center is aMOA diamond and dashed circle, surrounded by aMOA (4cm) dashed circle, same size as old zero target. The stan-dard was two consecutive groups inside four centimeters (6 Minutes of Angle), the scaled width of a full-size silhouette meters away. This is designed for zeroing the M16/M4 series weapon, use as a scoring target for When placed at meters, simulates an Army qualification range. Each Square = 1/2 inch. Remember you should aim low at m targets with an M See Army FM for more info. We are devolved back to a failed program from the s. Non-silhouette zeroing targets for hyper-politically-correct gun clubs. After zero exercise and sent off to the RETS/ARF range for qual as quickly as possible. It's also a more useful multipurpose target. For best results, shoot from a benchrestThis target will set your Yard Zero Target.
