

# Entryway catch-all table

We needed a place to organize our stuff where we walk into our house. This entryway catch-all sideboard is the first, of a few, that will help solve our problem.

 Difficulté Moyen

 Durée 5 heure(s)

 Catégories Décoration, Mobilier, Maison

 Coût 50 USD (\$)

## Sommaire

Étape 1 -

Étape 2 - Cut to the rough dimensions

Étape 3 - Cover up the plywood lines

Étape 4 - Attaching the strips

Étape 5 - Trim the strips using a router.

Étape 6 - Find tune everything

Étape 7 - Cut a few grooves

Étape 8 - Cut in a dado to the top and bottom piece

Étape 9 - Case assembly

Étape 10 - Make the doors

Étape 11 - Frame

Étape 12 - Cutting a long taper on the bandsaw.

Étape 13 - Joinery

Étape 14 - Glue and assemble everything

Étape 15 - Sand everything

Étape 16 - Finished

Étape 17 - Tada!

## Matériaux

## Outils

## Étape 1 -

I started with a full sheet of Maple plywood. I broke it down into manageable chunks using my track saw.

## Étape 2 - Cut to the rough dimensions

Then I cut to the rough dimensions on my table saw.

## Étape 3 - Cover up the plywood lines

To cover up the plywood lines, I ripped some thin strips of maple hardwood. Here I'm applying the glue to adhere the strips.

## Étape 4 - Attaching the strips

...and now actually attaching the strips. I "clamp" them on using some painters tape.

## Étape 5 - Trim the strips using a router.

I live the strips a little wider than 3/4 of an inch so that they are slightly proud of the plywood. Then I trim them flush using a router.

## Étape 6 - Find tune everything

Now that the rough pieces are created, I find tune everything to finished dimensions and cut in some joinery. Here I'm making miters on the edges of all of the case pieces.

On the second picture I'm cutting in rabbets to the backs of the pieces so that I can eventually inset the back panel.

## Étape 7 - Cut a few grooves

Then I cut a few grooves into the front of all of the pieces to hold some sliding doors.

## Étape 8 - Cut in a dado to the top and bottom piece

Finally I cut in a dado to the top and bottom piece to eventually insert a vertical partition. I use a router and then square up the cut using a chisel.

## Étape 9 - Case assembly

With every thing made, i assembled the case. I used a couple dominoes to make assembly easier and provide a bit of reinforcement.

## Étape 10 - Make the doors

Here I'm making the doors fro the case out of 1/4" maple plywood. They don't have any handles, just a little negative space for a finger to grab.

## Étape 11 - Frame

With the cabinet out of the way I turned my attention to the frame. First I milled and cut out blanks for all of the pieces. These are made from Walnut hardwood.

## Étape 12 - Cutting a long taper on the bandsaw.

You can see I'm a big proponent of marking the hell out of things. Trying to avoid mistakes...thought I still make them.

## Étape 13 - Joinery

Then with all of the pieces to their proper dimensions I cut in some joinery, and some dados to hold the shelves.

## Étape 14 - Glue and assemble everything

Then I glued and assembled everything.

Lots of assembly

## Étape 15 - Sand everything

Then I sanded everything.

## Étape 16 - Finished

Then I varnished everything

## Étape 17 - Tada!

This youtube video takes you through the design and build process.

It includes detailed builds, design-talk, 3D modeling, and more. Don't forget to subscribe!
