Introduction

TeamSpeak is a proprietary voice-over-Internet Protocol (VoIP) application for audio communication between users on a chat channel, much like a conference call. It is commonly used for communication in online gaming, allowing players to communicate with each other in real-time. Gamers can engage in various activities such as playing Spotify music on TeamSpeak while gaming to get an exciting vibe.

If you have no idea of **how to play Spotify music on TeamSpeak**, please look no further than this article to make it.

Matériaux

Étape 1 - Tool You Need for TeamSpeak Spotify Integration

Here is the best and the most easy-to-operate solution to listen to Spotify songs on TeamSpeak. You don't need to get the complicated TeamSpeak Spotify bot. That is to download Spotify songs to TeamSpeak-supported audio formats such as MP3, AAC, or WAV. Then you can add the download to the VOIP communication for playing without the Spotify app.

What you need is just a reliable Spotify downloader: the **AudFun Spotify Music Converter**. It specializes in downloading and converting any audio files from Spotify to WAV, MP3, AAC, FALC, M4A, and M4B. With its top-notch conversion technology, 100% original audio quality and lossless ID3 tags can be retained afterward.

Étape 2 - How to Download Spotify Music to MP3 for TeamSpeak

Here is how to download Spotify to MP3 for TeamSpeak using the AudFun Spotify Music Converter. Please install the AudFun app on your computer in advance.

Step 1. Drag and Drop your favorite Spotify playlists to the AudFun software to load the playlists to the converter.

Step 2. Click on the top **Menu** icon to access the **Preferences** option. Then switch to the **Convert** panel on the preferences window. After that, you can select the Spotify audio output format as MP3 for playing on TeamSpeak.

Step 3. Once set, click on the bottom **Convert** button to start converting.

Étape 3 - How to Play Spotify Music on TeamSpeak without Spotify Premium

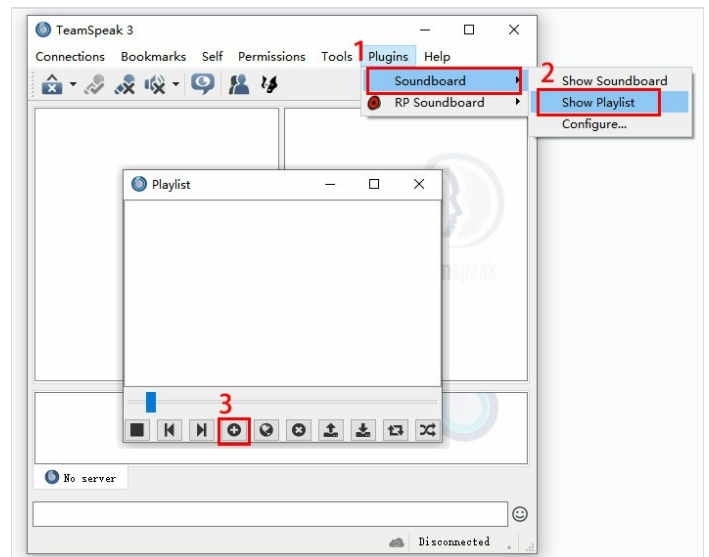

Now you have downloaded the Spotify playlists you want to stream on TeamSpeak to MP3 audio files. You can get ready to add those MP3 downloads to the communication software for playing by following the steps below.

Step 1. First, please install the TS3 Soundboard Plugin on your device.

Step 2. Launch the TeamSpeak app on your device and tap on the **'Plugin'** tab from the top side.

Step 3. From the pull-down list, choose **Soundboard > Show Playlist**.

Step 4. On the pop-up window, select and add the converted Spotify songs to the software. Afterward, you can start playing downloaded Spotify MP3 songs on TeamSpeak without restrictions.

Notes et références

Here is all about how to play Spotify music on TeamSpeak. In general, to save time, you can directly download your music collections from Spotify to TeamSpeak-compatible audio files. Then transfer the downloads to the VOIP communication software for listening inside the app. This way, you don't need to subscribe to Spotify Premium or other limitations.
