A number in parentheses indicates the year of last reapproval A sample of commercial denatured fuel ethanol was obtained from a producer and analyzed using the Agilent A GC System running ASTM method D Five aliquots of the sample were each measured two times for a total of ten runs. Identify apparatus and related components, including gas chromatograph and column. Define reagents and materials used for the determination of the ethanol content of ASTM-D › Standard Test Method for Determination of Ethanol and Methanol Content in Fuels Containing Greater than% Ethanol by Gas Chromatography ASTM2 method D, "Determination of Ethanol Content of Denatured Fuel Ethanol by Gas Chromatography," details the analysis. This method is applicable to denatured fuel ethanol, ethanol fuel blends, and mid-level ethanol blends Producer labs and analysts are busy Standard Test Method for Determination of Ethanol Content of Denatured Fuel Ethanol by Gas ChromatographyThis test method covers the determination of the ethanol Full Name: ASTM DCalibration Standardcomponents: Methanol [CAS] % (w/w) ; n-Heptane [CAS]% (w/w) ; Ethanol [CAS]% Designation: D –Standard Test Method for Determination of Ethanol and Methanol Content in Fuels Containing Greater than% Ethanol by Gas Chromatography1 This standard is issued under the fixed designation D; the number immediately following the designation indicates the year of This standard is issued under the fixed designation D ; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. An example chromatogram is shown in Figure 2 ASTM Dfor Denatured Fuel Ethanol: Automating Calculations and Reports with EmpowerSoftware Author: Larry Meeker and Alice J. Di Gioia Subject: This application note briefly describes the use of EmpowerSoftware for denatured fuel ethanol analysis and reporting ScopeThis test method covers the determination of the ethanol content of hydrocarbon blends containing greater than% ethanol.
