Short forms to assess life quality and symptom distress for urinary incontinence in women: the Incontinence Impact Questionnaire and the Urogenital Distress Inventory The Incontinence Impact Questionnaire (IIQ) was designed by Shumaker et al. to assess the impact of urinary incontinence on activities and emotions in women. Health-related quality of life measures for women with urinary incontinence: the Incontinence Impact Questionnaire and the Urogenital Distress Inventory. The Incontinence Impact Questionnaire (IIQ) is a self-report intended to measure disease-specific quality of life in women with stress urinary incontinence [Shumaker et al.]. For each question, check the response that best describes how much your activities, relationships, or feelings have been affected by your bladder, bowel, or vaginal. Uebersax JS, Wyman JF, Shumaker SA, et al. Short forms to assess life quality and symptom distress for urinary incontinence in women: the incontinence impact questionnaire and urogenital distress inventory The Incontinence Impact Questionnaire (IIQ) is a self-report intended to measure disease-specific quality of life in women with stress urinary incontinence [Shumaker et al., Uebersax JS, Wyman JF, Shumaker SA, et al. Continence Program in Women (CPW) Research Group. Continence Adapted from Uebersax JS, Wyman FF, Shumaker SA, et al.
