ISO describes the application of the Vickers and Knoop micro-indentation tests for determining the microhardness of metallic and other inorganic coatings. SS-EN ISO INTERNATIONAL STANDARD ISO (E) © ISO - All rights reserved
Metallic and other inorganic coatings – Vickers and Knoop microhardness tests
Scope This International Standard describes the application of the Vickers and Knoop micro-indentation tests for determining the microhardness of metallic and other inorganic coatings
1 Scope. This International Standard describes the application of the Vickers and Knoop micro-indentation tests for determining the microhardness of metallic and other inorganic
Abstract. International Standard ISO was developed by Technical Committee ISO/TC, Meta//ic and other non-organic coatings, and was circulated to the member
Metallic and other inorganic coatings Vickers and Knoop microhardness tests (ISO) (Swedish Standard) Documents sold on the ANSI Standards Store are in SS-EN-ISO › Metallic and This document is available in either Paper or PDF format.
ISO, Metallic and other inorganic coatings – Vickers and Knoop microhardness tests EN ISO It is identical with ISO It supersedes BS which is withdrawn. 1 Scope. ISO, Metallic and other inorganic coatings – Review of methods of measurement of thickness. This the ISO Council. Designation Name. ORDER. The UK participation in its preparation was entrusted to Technical Committee STI/37, Methods of test for metallic and related inorganic coatings including corrosion tests, which has the responsibility to Price: \$ Want this as a site license? This International Standard describes the application of the Vickers and Knoop micro-indentation tests for determining the microhardness of metallic and other inorganic coatings ISO describes the application of the Vickers and Knoop micro-indentation tests for determining the microhardness of metallic and other inorganic coatings Metallic and non-metallic coatings – Measurement of thickness – Beta backscatter method.
