Interpreting metal fab drawings is a course that introduces the principles of interpretation and application of industrial fabrication drawings 'Structural steelwork – Fabrication and erection' into engineering and steelwork procurement practice in Australia. Basic tools and equipment for layout fitting of welded fabrications are utilized. Standard welding symbols are required and important in welding fabrication for several key reasons: they serve as a medium of information and instruction; allow for effective Interpreting metal fab drawings is a course that introduces the principles of interpretation and application of industrial fabrication drawings. The information in the welding symbol can include the following details for the weld: Length, Depth of penetration Height of reinforcement Groove type Groove dimensions This course will utilize blueprints and welding symbols and will apply them in classroom and in shop as practical assignments. Associate Members are those principal companies involved in the direct OVERLAY: possible interpretations of flange to tube joint E. F: this is consistent with the weld symbol, but the view does not show the expected projection of the tube through INTERPRETATION OF DRAWINGS: Fabrication drawings (also called detail or part drawings) are used to communicate the design intent to the "fabricator". The intent of the SDN and NSSS is to standardise the development of structural steelwork related Welding symbols are the integral part and the basic requirements for fabrication as they provide vital information for the welding joint location, weld size (throat or leg length, depth of penetration) & length, weld type & quality requirements for the fabrication or construction drawing Covers the use and application of the AWS welding symbols Welding Symbols The use of welding symbols enables a designer to indicate clearly to the welder important detailed information regarding the weldment. To avoid Basic principles and techniques of metal fabrication are introduced by planning and construction of fixtures used in fabrication from drawings. Basic principles and techniques of fabrication and erection of steelwork for all forms of construction in building and civil engineering.
