the same technology is also used in the liaison®. delivering greater testing efficiency on a single, fully automated platform, liaison® xl represents a new benchmark in automated specialty testing. with an all- in- one process and true continuous loading, this powerful, high- volume chemiluminescence analyzer frees up liaison xl test menu pdf time when resources are scarce. liaison® xl uses chemiluminescent technology " flash" pdf (clia) with a fixed phase of paramagnetic microparticles. diasorin provides an effective and automated, serology testing solution with traditional and consolidated first- line assays, together with additional markers to further investigate thyroid disorders. the assay is intended as an aid in the diagnosis of hcv infection in individuals with or without symptoms of hepatitis. liaison® xl utilizes chemiluminescence technology with magnetic microparticles (mp), the same proven quality technology used for ^ high reagent. bio- flash is a fully automated, random access chemiluminescent analyzer for any autoimmune laboratory. different history, different experiences and different needs. vitamin d deficiency and insufficiency may result in abnormalities of bone structure in children, muscle and bone weakness and increase falls pdf in the elderly. all components are ready to use in one integral. note: before selecting any diagnostics command, make sure the module is in off- line status. the liaison xl murex hbeag is a laboratory test used to detect human hepatitis b e antigen (hbeag) associated with hepatitis b virus (hbv) infection. it delivers enhanced workflow efficiencies, market leading ease- of- use and improved assay performance compared with existing enzyme- based systems. the liaison® xl. liaison® xl / liaison® xs. leader in immunochemistry specialties, diasorin provides to all the laboratories a test menu with more than 110. the liaison® analyzer combines flexible operating mode with a broad assay menu and leads to high efficiency due to its long walk- away time. collect the sample by anterior nasal swab and place it dry into its container. moreover, a throughput of up to 180 determinations. each allowable option that can be selected is described here below. sonx uali in result re ortin in- process controls include 100% continuous monitoring of all critical assay processing steps, ensuring the highest quality in result reporting. thyroid diseases can affect heart rate, energy level, metabolism, bone health, pregnancy and many other functions. liaison® xl combines unparalleled process management reliability with the effectiveness of our field- proven liaison® technology, letting you quickly create a specialized lab within your existing operation. the possibility to run up to lf> different assays at a lime provides rational everyday testing even for low numbers of samples. the innovative system functions allow liaison® xl to improve the efficiency of immunological laboratories. a wide range of specialty tests. through liaison® xs, even in low volume laboratories can be achieved an higher efficiency and a new effectiveness. chemiluminescent immunoassay for the qualitative determination of specific antibodies

to hepatitis c virus (anti- hcv) in human adult and pediatric(2 – 21 years) serum and plasma (lithium and sodium heparin, sodium citrate and - potassium edta) samplesdi includi ng separator tubes, on the liaison. with on- board reagents and stored calibration curves, bio- flash makes even the most specialized. trademarks: quantiferon ® (qiagen group), liaison, lymedetect ® (diasorin) for outside the us and canada only product availability subject to required regulatory appr

 Difficulté **Moyen**

 Durée **291 jour(s)**
