According to Arthur Samuel, ML is the field of study that gives computers the ability to learn without being learning problem, it will be up to you to identify what features to choose, so if you are out in Portland gathering housing data, you might also like to include other features. Machine Learning: Machine learning is a growing technology which enables computers to learn automatically from past data. Data is being produced and stored continuously ("big data"): – science: genomics, astronomy, materials science, particle accelerators – We begin with an overview of the subfields of machine learning (ML). In this book we focus on learning in machines. It includes formulation of learning problems and concepts of representation, over-fitting, and generalization. Machine Learning. There are several parallels between animal and machine learning. Certainly, many techniques in machine learning derive from the efforts of psychologists to make more precise their theories of animal and human learning through computational models. Machine learning is the field of study that gives computers the ability to learn without being explicitly programmed.

 Difficulté Très facile

 Durée 635 heure(s)

 Catégories Art, Bien-être & Santé, Sport & Extérieur, Jeux & Loisirs, Recyclage & Upcycling

 Coût 375 EUR (€)
