Psychotherapy outcome prediction by patient suitability has been almost exclusively studied based on short-term therapies Suitability for Psychotherapy Scale (SPS) The evaluation of the suitability for psychotherapy was carried out using a seven-item SPS, which was developed in the Helsinki Psychotherapy Study (Appendix, Table 2).The seven-item scale described in the present study has similarities to other suitability scales Maarit A. Laaksonen et al. SPS Suitability for Psychotherapy The SPS was evaluated at baseline, before initiating the treatments American Journal of Psychotherapy Suitability for Psychotherapy Scale. BetterhelpFrom \$/week · Faithful CounselingFrom \$/week Patients' psychological, intrapsychic and interpersonal, capacities are among the core psychotherapy suitability selection criteria suggested for differentiating those treatable American Journal of Psychotherapy The interview-based Suitability for Psychotherapy Scale (SPS) (Laaksonen et al.,) was used as the predictor of treatment refusal and premature termination in the present psychotherapy suitability: therapy focus, modulation of affects, flexibility of interaction, self-concept in relation to ego ideal, response to trial interpretation, reflective ability, and of psychotherapy suitability and its prediction of psychotherapy outcomes remains scarce, however. Only a few psychotherapy suitability assessment scales have been studied for their reliability and validity. Table 2 The majority of the patient predictors were assessed with the interview-based Suitability for Psychotherapy Scale (SPS) (44).
