EyeQ6 Lite offers four-and-a-half times more compute Mobileye EyeQ5-based system – one of the industry’s first where the forward-facing camera and related software are contained in a single assembly. See Appendix A Appendix A for a more detailed description of the test It’s a one-box windshield solution capable of supporting all core ADAS applications. This document is an Abstract of the complete Application Report, Mobileye EyeQ5 – High Core Rail Power-Supply Design Using TPSQ1 and TPSQ Please contact your local Texas Instruments representative to access the complete Application Report. Benefits include lower cost, simplified installation on the assembly line, and the ability for the technology to be applied to a wider range of an automaker’s lineup. The MobileyeSeries should not be transferred between vehicles, other than by an authorized Mobileye dealer or installer. The The MobileyeSeries installation must be carried out by an authorized Mobileye dealer or installer. The MobileyeSeries should only be operated withVDC~24VDC power The special test software generates the maximum digital core power rail current transient (continuously switching from a low current level to a high current level and back), while dissipating W for EyeQ4H and W for EyeQ4M.
