It's easier than ever to build user interactions with Hotwire, Turbo, Stimulus, and packer. Use React to build a more complex set of client-side features. You can add great front-end flair without much extra complication Rails simplifies client-side integration with the packer gem. Rails version has tools that help you interact with the JavaScript ecosystem to build an exceptional front-end experience. The job is even easier with Stimulus, a library that brings Rails conventions In this book, you'll learn how you can enhance the user experience of a standard Rails application using front-end tools from the Rails ecosystem (Hotwire, Stimulus, Turbo, ISBN
