Based on the multidimensional The multidimensional attitudes scale towards persons with disabilities (MAS) – a Polish adaptation (MAS-PL) This study modified the original MAS to assess attitudes toward persons with different types of disabilities. The study included person (% of students and % of workers), whose attitudes towards the The scale was distributed to a sample of people along with a self-esteem measure and a frequently employed attitude scale, the Attitudes Toward Disabled Persons Scale (ATDP). This study presents the development of a new instrument, the Multidimensional Attitudes Scale Toward Persons With Disabilities (MAS). The construct and concurrent validity of the questionnaire was demonstrated by reliability and factor analyses, as well as by comparison with the ATDP scale measure attitudes toward people with disabilities in gen eral (e.g., Attitudes Toward Disabled Persons Scale (ATDP), Yaker, Block, & Campbell, ; Disability Factor Scales Materials and method. The adequate reliability and fit of the factor structure of the MD Abstract and Figures. Based on the multidimensional approach The Multidimensional Attitudes Scale (MAS) toward Persons with Disabilities (Findler et al.,) is based on understanding that attitudes comprise three dimensions: affect, cognition, and The aim of this study was to create a Polish adaptation of the Multidimensional Attitudes Scale toward Persons with Disabilities (MAS) by performing a statistical psychometric analysis in a sample of Polish students. Multidimensional Attitudes Scale Toward Persons With Disabilities (MAS) created by Findler, Vilchinsky and Werner [] is a recognized, multidimensional tool enabling The Multidimensional Attitudes Scale toward Persons with Disabilities (MAS; Findler, Vilchinsky & Werner,) assesses three dimensions of attitudes toward people with This study presents the development of a new instrument, the Multidimensional Attitudes Scale Toward Persons With Disabilities (MAS).
