Included in this chapter are specific design techniques for various pressure piping products. Engineering Standard SAES-L Pressure Testing of Plant Piping and Pipelines ember Document Responsibility: Piping Standards Committee Saudi Aramco Saudi Aramco Engineering Standards (SAESs) are standards, approved by Saudi Aramco Management, that establish minimum mandatory requirements for the The SSMS manual that Saudi Aramco's suppliers can adopt is designed to meet or exceed the requirements of the International Management System Standard for Occupational This standard covers the design, material specifications, manufacturing and erection of precast and prestressed concrete products including building components such as alteration, moving, demolition, repair and use of Saudi Aramco (SA) buildings. Methods for determining internal loads, external loads, and combined loads are given along with design bases 1 ScopeThis standard supplements ASME Bcodes and defines additional minimum design requirements for pressure piping located within plant areasFurther requirements related to specific plant piping systems are covered by other Saudi Aramco Piping Standards as specified in SAES-L 1 Scope. This standard defines the minimum mandatory requirements governing the design and installation of process flow instruments Saudi Aramco buildings include buildings within Saudi Aramco facilities, on Saudi Aramco The handbook includes approval requirements based on Saudi Aramco (SA) and Industry applicable standards, as well as ISO Quality Management System (QMS) requirements Saudi Aramco Engineering Standards (SAESs) are standards, approved by Saudi Aramco Management, that establish minimum mandatory requirements for the selection, design, construction, maintenance, and repair of equipment and facilities Pressure pipes are normally buried with less soil cover so the soil loads are usually less.
