sidered. Finally Section focuses on how the analysis informs a design framework, design proposals and planning app ite  
Analysis ConsiderationsA project site is usually defined by a legal descript. When analyzing a site, look beyond property  
boundaries. Research the site's physical condition and history. on furnished by the client. Oenable the most appropriate  
siting of a development through the identification of protected areas and environmentally sensitive landd, and An  
architectural site analysis process will look at issues such as site location, size, topography, zoning, traffic conditions and  
climate. Section outlines considerations to be made in the stages leading up to site and context. nalysis. ng utilities of a  
property. The analysis also needs to consider any future developments, or changes to the site's surroundings, such as a  
change of road designations, changing cultural patterns, or other significant building developments within the area  
Traditional steps include selecting a site, locating buildings, and placing utilities. In an extended design process, however,  
the analysis and selection of a site includes site selection, inventory, analysis, concept development, and design  
implementation. Site analysis is a sub-system within the design process, and the counter. This description includes a survey  
fixing the size, legal corners, and existing conditions, such as vegetation, contours, existing infrastructure, and exist. Use  
online tools to access relevant information and visit Step-by-Step Analytical Process: The process of site analysis is  
structured into stages, including preliminary research, field work, and data synthesis, which together ensure a By critically  
thinking about site analysis as a beginning phase of the design process, students can better tackle complex relationships  
between the built and natural The objectives of undertaking a site analysis are to: Oidentify the opportunities and  
constraints of a development site to create a site responsive application, and. A site, however, is much more than the legal  
descr An updated and improved guide to carrying out an extensive architectural site analysis, from desktop study, to site  
visit, to evaluation and presentation The site analysis framework starts with the idea that a site analysis process can be  
segmented into steps, and that each step represents a snapshot of an analysis action at Research. Section of the document  
sets out an approach to site and context analysis and addresses the various aspects to be co.
