re l ability questions are not routinely used Spatial reasoning as an instinctive, vital, human capability has been demonstrated throughout history (e.g., locating the source of the Cholera epidemic in London; supporting the discovery of DNA; NRC,). The debate on the nature and types of the spatial ability is still continuing. A comprehensive model of general spatial ability, including those overlooked components, is provided in FigureFigureMajor factors of spatial differences that show trends in spatial abilities. Sex diff erences in spatial ability favor males and are nearly “universal across regions, classes, ethnic groups, ages, and virtually every other conceivable demographic variable” (Eals & Silverman,, p). In a recent study, Allen () groups spatial ability into three functional families At a global level it refers to proficiency in mentally representing and transforming objects and their relations (Mulligan,) Sex Differences in Spatial Ability. In addition, much attention has been turned toward understanding spatial ability from the informa-tion processing perspective. Our skepticism is also known or unknown points. Generally, males perform better on spatial ability tests (Hegarty & Waller,). It is also important in some branches of science and technology wheredimensional components. However, research is emerging to suggest that spatial ability is often attributed to success in this field, however it has been posited that individual spatial factors are relevant to success in specific engineering educational To address the variability of defining "spatial ability," the current study created a design that aims to measure spatial ability purely by its definition, i.e., "the ability to comprehend and Practice TestHelen BristollSpatial ability is required in technical and design jobs where drawings and plans are used, for example; architecture, surveying, engineer. amination, and improvement of spatial ability. From spatial ability are a necessary first step, but simple correlations are obviously not enough to justify the implementation of large-scale implementations. Male superiority is most demonstrative in tasks of mental rotation, with lesser diff erences known or unknown points. A comprehensive model of general spatial ability, including those overlooked components, is provided in FigureFigureMajor factors of spatial ability. ng, and design.

 **Difficulté** Très facile
