It is an economical and versatile corrosion resistant alloy suitable for a wide range of general purpose applications Grade is the standard "18/8" austenitic stainless; it is the most versatile and most widely used stainless steel, available in the widest range of products, forms and finishes. It is still sometimes referred to by its old name/8 which is derived from the nominal composition of type being Types, L and H are the most versatile and widely used of all the stainless steels. ngth, and ductility. ngth, and ductility. Their chemical composition, mechanical properties, weldability and SS L (UNS S)SS L is an austenitic Chromium-Nickel stainless steel ofering the optimum combination of corrosion resistance, str. Their chemical composition, mechanical properties, weldability and corrosion/oxidation resistance provide the best all-round performance stainless steels at relatively low cost SS L (UNS S)SS L is an austenitic Chromium-Nickel stainless steel ofering the optimum combination of corrosion resistance, str. These stainless steel (originally stainless) is one of the largest and most commonly available grades of austeni c stainless steelstainless steel is a versa le grade of Specification Sheet: Alloy /L. Datasheet 1, AISI stainless steel composition. Type grade stainless steel composition is given in table below. Datasheet-2, the tables below list SS material mechanical properties including yield strength, tensile strength, elongation and hardness, etc Types, L and H are the most versatile and widely used of all the stainless steels. Fe Type is the most versatile and widely used stainless steel. Alloy /L (UNS S/S) is the most widely utilized "" chromium-nickel austenitic stainless steel. Stainless Steel Grade Chemical Formula. It has excellent forming and welding characteristics Chemical Composition. These attributes make it a favorite for many mechanic SS Stainless Steel Mechanical Properties.
