How Buildings Learn is a masterful new synthesis that proposes that buildings adapt best when constantly refined and reshaped by their occupants, and that architects can mature from being artists of space to becoming artists of time. From the connected farmhouses of New England to I.M. Pei's Media Lab, buildings have often been studied whole in space, but never before have they been studied whole in time. When a building is finished being built, that isn't the end of its story. How Buildings Learn is a masterful new synthesis that proposes that buildings adapt best when constantly refined and reshaped by their occupants, and that architects can mature from being artists of space to becoming artists of time. From the connected farmhouses of New England to I.M. Pei's Media Lab, buildings have often been studied whole in space, but never before have they been studied whole in time. Do you ever pause to consider the life and evolution of the buildings around you? From soaring skyscrapers to humble cottages, A captivating exploration of the ever-evolving world of architecture and the untold stories buildings tell. How Buildings Learn is a masterful new synthesis that proposes that buildings adapt best when constantly refined and reshaped by their occupants, and that architects can mature from being artists of space to becoming artists of time. From the connected farmhouses of New England to I.M. Pei's Media Lab, buildings have often been studied whole in space, but never before have they been studied whole in time. More than any other human artifacts, buildings improve with time—if they're allowed to. How Buildings Learn: What Happens After They're Built is an illustrated book on the evolution of buildings and how buildings adapt to changing requirements over long periods of time. This practical book aims to integrate all the different aspects of the fragmented design and construction process, so that buildings can be seen as embodying a functional, yet flexible, and evolving form. How Buildings Learn William B. Rose How Buildings Learn Stewart Brand, Buildings have often been studied whole in space, but never before have they been studied whole in time.
