

SpaceX's Develop to De-Orbit the ISS In 2030

Last Update: June 27, 2024

In 2030, SpaceX is planning to de-orbit the International Space Station (ISS), marking the end of an era for this iconic space station. Over the years, the ISS has played a crucial role in advancing human space exploration and scientific research. Let's explore the reasons behind SpaceX's decision to de-orbit the ISS and what it means for the future of space exploration.
