Er besteht aus sechs Bereichen: Spontansprache, Token Test, Nachsprechen, Schriftsprache, Sprachverständnis und Abbildungen. This is non-restrictive list of tests that can help in differentiating between PPA subtypes. Spearman's correlations and Intraclass Correlation Coefficient (ICC) were used to The Aachener Aphasie Test (AAT) is the major German test for the diagnosis of aphasic disorders. It is demonstrated that intensive SLT leads to improvements of linguistic skills in chronic aphasia patients and this clinical improvement is associated with enhanced automatic brain indexes of construction processing, although no comparable change is present for ungrammatical strings. We distinguish three 'classes' of tests or test batteries Normative tests such as Aachener Aphasie Test (AAT) (Huber et al.), Psycholinguistic Expand Der AAT ist ein standardisierter, im deutschsprachigen Raum weitverbreiteter Aphasie-Test, der sechs Untertests und einen Token Test umfasst. The test is easy to use and is valid and reliable for the diagnosis of aphasia Results: The Italian version of the Functional Outcome Questionnaire Aphasia showed good internal consistency and test-retest reliability for the overall scale ($\alpha =$; ICC = Introduction The Aachen aphasia test is a test of language functioning after brain injury, and as such aims to: reliably identify the presence of aphasia ; provide a profile of speakers ' language functioning according to different language modalities (speaking, listening, reading, writing) and different levels of linguistic description Download scientific diagram Results of the Aachener Aphasie Test (AAT) (in percentile scores) and changes in profile level (in t-scores); * indicates significant improvement tt = token test, rep Neurosci TLDR. Methods for the analysis of a single subject's test profile (s) proposed by Huber () are applied to the Aachen The Aachner Aphasie Test (AAT) was administered to assess concurrent validity. We tested the hypothesis that motor planning and programming of speech articulation and verbal short-term memory (vSTM) depend on partially overlapping PMIDDOI: Abstract. Argye E Hillis. Der Test wird anhand einerstufigen Bewertungsskala beurteilt therapist to assess the different domains.
