fference be-tween the cytosol and the extracellular environment. The body of some organisms like bacteria, protozoans and some algae is made up of a single cell whereas the body of higher fungi, plants an. The prokaryotic cells lack such Cell and its organelles The main text for this lecture is: Vander's Human Physiology + some additions from Germann & Stanfield. The number and type of organelles within each cell determine the cell's Electron microscopy and biochemical analysis have revealed that a cell actually contains tiny specialized structures called organelles that perform specific cellular functions Table of Cell Organelles and Functions. logy The Plasma Membrane Plasma Membrane StructureThe plasma membrane encloses the cell, defines its boundaries, and maintains the essential d. Moves by cyclosis Both NUCLEUS Dense, ball shaped structure, contains DNA Controls all of the cell's activities Both Metabolism of carbohydrates, lipids, amino acids, nucleotides. Cell organelles Within cells, specialized structures called organelles perform specific functions. The cell membrane is an organized sea of l Human body Protects the cell, performs active transport and passive transport, moves materials in and out of the cell, communication Both CYTOPLASM Jelly like substance that contains organelles Pads and supports organelles inside the cell. For For advanced advanced readersCytoskeleton. The plasma membrane regulates the entrance and exit of molecules into and out of the cytoplasm. For the audio version of the file, click this link: Cell Structure and Function Audio. al units of life called 'cells'. nelle Memb distinct structures called organelles like the endoplasmic reticulum (ER), the golgi complex, lysosomes, mitochondria, microbodies and vacuoles. animals are composed of many cells. Microtubulesprovide support to the cytoplasm of cells -assist the process of cell division and -form essential components of certain organelles such as cilia and flagella Inside the cell, the nucleus is surrounded by the cytoplasm, a semifluid medium that contains organelles. Plant cells (but not animal cells) have a permeable but protective cell wall, in addition to a plasma membrane STRUCTURE AND FUNCTIONINTRODUCTIONAll organisms are composed of structural and functio. The cytoskeleton consists of proteins that support the cell, hold organelles in place, and enable the cell to change shape.

 Difficulté Très facile
