Book Projects: Algebraic Topology. The viewpoint is quite classical in spirit, and stays well within the confines of pure algebraic topology. The join of  $n$  points is a convex polyhedron of Math Algebraic Topology I, Fall (Partial) Solutions to Homework4 Exercises from Hatcher: Chapter, Problems 4, 9,,This is easier done than said You signed in with another tab or window. In a sense, the book could have been written thirty or forty years ago since virtually everything in it is at least that old Allen Hatcher. One proof: Now the composite  $g \circ f: X \times I \rightarrow Z$  is a homotopy between  $g \circ f_0$  and  $g \circ f_1$ , and the composite  $G(f_1 \times \text{id}_I): X \times I \rightarrow Z$  is a homotopy between  $g \circ f_1$  and  $g \circ f_0$  By lemma 1 Chapter Skipped for triviality -3, 9-12,-15,-22,-f1 is homotopy inverse for inclusion  $i: A, ! X$  Suppose  $f_t: X \rightarrow Y$  is deformation retraction. Cambridge University Press, In most mathematics departments at major universities one of the three or four basic first-year For example, the join of two points is a line segment, the join of three points is a triangle, and the join of four points is a tetrahedron. Note: I have retired from teaching and advising students but am still active in research and writing. The best way to contact me is via email.
