Features Prevents product from vaporizing by maintaining positive pressure above vapour pressure Becomes a self-venting plan for horizontal pumps Default API Plan for most single seals. API Piping plans help to ensure good conditions for mechanical seal operation as well as improving safety and pump reliability Objective: To reduce oxidation, coking or crystallization of process accumulating on the atmospheric side of the seal. Customer specific variants of these plans are possible. EagleBurgmann offers a wide range of high quality mechanical seals and supply systems which fully comply with API API PLAN Description Product recirculation from pump discharge to seal through a flow control orifice. Use 1 Plan is a dual-seal piping plan where the buffer fluid is circulated via an external source between the dual seals at a pressure lower than the seal chamber pressure. Advantages: Utilizes miniscule flow rate of water or only a "whisper" of nitrogen or steam (2-4 psi). Plan is leakage detection vessel used with single seals. Customer specific variants of these plans are possible. API Piping plans help to ensure good Missing: pdf Objective: To reduce oxidation, coking or crystallization of process accumulating on the atmospheric side of the seal. Can also provide some heating or cooling. This has now been renamed as API Plan A or B, which accommodates the two different methods users were Advantages: Utilizes miniscule flow rate of water or only a SEALS MECHANICAL SEAL PIPING PLANS DUAL SEALS PLANA ILLUSTRATED API BEST PIPING PRACTICES mm/m ½ per foot Min. Slope CW Shaft Rot. Shown API piping plans with short specifications of all piping plans, symbol library Selection of barrier/buffer media for contacting wet dual seals Seal coding system API seal code and Plan is a dual-seal piping plan where the buffer fluid is circulated via an external source between the dual seals at a pressure lower than the seal chamber pressure. Single Seals Plan A to drain Process side Between seals Atmospheric side Plan The API has emerged to become a worldwide accepted standard in today's refinery and hydrocarbon related applications. These are standardized flushing piping arrangements that are widely used in the industry. Plan is These are standardized flushing piping arrangements that are widely used in the industry.
