Just provide the paths to individual images and at the end of the command, name the output file. Cool isn't it? :) Did it work for you? To convert to a single PDF can be done in a single command: `convert -compress jpeg *.jpg` Remember to include the `-compress jpeg` flag, or it'll store the images uncompressed and result in a massive PDF. ImageMagick (via `convert`) requires Ghostscript (`gs`) to be installed in order to process PDFs I believe `sudo apt install imagemagick`. Answers. If you want to turn one image into You could use `mogrify` to batch convert & resize in the current directory: `mogrify -verbose -densityresizeformat png./*.pdf` After installing `img2pdf`, we can convert images to PDF using: `$ img2pdf -o` This command converts the three images to a single PDF file with the name Similarly, we can also convert images to PDF by giving the extension name: `$ img2pdf *.jpg *.png -o` Here you can find an extremely raw bash script that worked for me to extract and reconstruct the png files with matching hashes to the ones used for input into the pdf. For example, something like this: `convert That's it. Nothing more to be done. Just select the PNG image you want to convert, or drag and In bash: for f in *.jpg; do convert./"$f"/" ${f%.jpg}.pdf" done` You can convert one image into one PDF, multiple images into multiple PDFs, or multiple images into one PDF. The tool makes this very easy! Sorted by From the `imagemagick` package, use the `convert` command: `convert *.jpg -auto-orient` You will get a single pdf containing all jpg in the The Acrobat online PNG image converter makes it easy to convert an image file into a high-quality PDF document. After installing it, convert your images to PDF with the following command: `convert *.jpg my_` All JPG files include in `my_` file Once you have it installed, use the 'convert' command line tool of ImageMagick.
