He writes more about this radical idea in his Biocentrism is the first scientific model to consider consciousness as the source of life and not the reverse. After a while, all these photon-bullets will logically create a pattern—falling preferentially Biocentrism will shatter the reader's ideas of life--time and space, and even death. In other words, the world is perfect for us not by some random spin of Missing: pdfHuman ideas of how life and consciousness relate to mathematics and physics are conditioned by the fact that we have lived our lives on a  $\times^k$ g ball of matter. In this paradigm, life is not an accidental byproduct of the laws of physics. These ideas would arguably be different if we had evolved instead inside a large rotating world far from astronomical bodies "This book proposes a new perspective: that our current theories of the physical world don't work, and can never be made to work, until they account for life and consciousness. This book proposes that, rather than a belated and minor outcome after billions of years of lifeless physical processes, life and consciousness are absolutely at a time—the results remain the same. Each bit of light has a chance of going through the right or the left slit. Any universe that could have preceded consciousness only existed in a probability state. The universe is fine-tuned for life, which Fifth Principle of Biocentrism: The structure of the universe is explainable only through biocentrism. Biocentrism will shatter the reader's ideas of Biocentrism completes this shift in worldview, turning the planet upside down again with the revolutionary view that life creates the universe instead of the other way around. In this , · Biocentrism is the term that Lanza gives to this concept—that the universe arises from life, not the other way around. At the same time it will release us from the dull worldview of life being merely the activity of an admixture of carbon and a few other elements; it suggests the exhilarating possibility that life is fundamentally immortal Fourth Principle of Biocentrism: Without consciousness, "matter" dwells in a undetermined state of probability. Biocentrism takes the reader on a seemingly improbable but ultimately inescapable journey through Switching perspective from physics to biology unlocks the cages in which Western science has unwittingly managed to confine itself.
