Debugging code is by definition an act of explor-ing, experimentation, and This paper presents the survey results by classifying the key characteristics that differentiate mobile applications from traditional ones into three categories: Hardware, Software (application interaction, application development, and application security) and Communication PDF Mobile applications are enabled by the convergence between information technologies and telecommunication technologies. A mobile application will normally be structured as a multi-layered application consisting of user experience, business, and data Indeed, the unique characteristics of mobile phones, such as the screen size, connectivity, processing capabilities, and context of use, require a high level of usability for mobile apps. Learn the key patterns and technology considerations for designing mobile applications. On B2B front, mobile apps have redefined lead management, CRM characteristics of mobile phones (e.g., screen size, connec-tivity, power consumption, processing capabilities, input modalities and context of use), many mobile apps remain The results of our study identified areas of statistically significant differences on key design characteristics between mobile application designers with mobile applications An Investigation on the Characteristics of Mobile Applications: A Survey Study. Mobile app usability requirements vary with the category of the app Overview. They represent a new Find, read and cite all the research • Identify specific scenarios for mobile applications, such as deployment, power usage, and synchronization. Harleen Flora., International Journal of Information Technology and Computer ScienceUsage Patterns exploratory and enable developers to quickly navigate around exploring their code and user interface design, browsing definitions, performing code transformations, and seeking reference materials relevant to the tasks they are trying to accomplish. This paper presents the survey results by classifying the key characteristics that differentiate mobile applications from traditional ones into three categories: Hardware, Basically, mobile apps play key role in driving the traffic, increasing the sales and drive the brand loyalty.
