Consider the hazards and people identified in Steps and act to remove and reduce risk to a fire risk assessment including measures to reduce or eliminate the risk of fire and identify the persons at risk. Make a note of anything within your construction site which could start a fire (such as machinery, chemicals and This Fire Risk Assessment has been undertaken in accordance with Publicly Available Standard PAS (British Standard Institute): Fire Risk Assessment – Guidance The fire safety risk assessment is a step process Step 1 Identify fire hazards. Where there are or more employees a record must be kept of significant findings. A schematic is attached. Employees, contractors, visitors and anyone who is vulnerable (for example, people nearby or anyone with a disability) Evaluation and action. Step 4 The Fire Safety Management plan is contained within the Health & Safety file and is kept in the Health & Safety Advisors office. Each year, insurance companies pay out millions of pounds in claims following significant fire and smoke damage events to commercial and domestic What are the fire hazards within your construction site? The Regulatory Reform (Fire Safety) Order (FSO) sets out the law on construction site general fire safety. Step 1 Identify people at risk. Any residual risks and their control measures can then be communicated to those affected using the SFSP Consider how a fire could start and what could burn Identify the people at risk. Step 2 Evaluate, remove, reduce and protect from risk. The fire risk assessment will follow the step narrative method as To demonstrate this, a project-specific fire risk assessment must be carried out to formally assess and record all potential fire hazards, risks and personnel affected. It confirms that a fire risk assessment will be completed to ensure adequate fire safety and will be reviewed as necessary. The aim of the fire risk assessment is to: Identify fire hazards and people at risk and to remove or reduce the risk of those hazards causing There are five steps in carrying out a fire risk assessment: Identify hazards: consider how a fire could start and what could burn; People at risk: employees, contractors, visitors and The FSO requires that a 'responsible person' must carry out, AA guide to loss prevention.
