Equipotential bonding for low-voltage consumer's installations as part of the internal lightning protection represents an extension of the protective equipotential bonding (previously: main equipotential bonding) according to IEC (HD) (Figure)IEC, Safety of machinery – Electrical equipment of machines – PartGeneral requirements. IEC, Low-voltage fuses – PartSupplementary requirements for fuses for use by authorized persons (fuses mainly for industrial application) – Examples of standardized systems of fuses A to K This part of IEC addresses the earthing arrangements and protective conductors including protective bonding conductors in order to satisfy the safety of the electrical installation. The standards cover fundamental principles, protection against electric shock This document listsInternational Electrotechnical Commission (IEC) standards related to low-voltage electrical installations and protection. This consolidated version of IEC is based Equipotential bonding for power supply systems. NOTEGuidance on Part 1, · IEC ember 1, Low-voltage electrical installations – Part Selection and erection of electrical equipment – Devices for protection for safety, International Standard IEC has been prepared by IEC technical committee Electrical installations of buildings. This document also includes requirements regarding earthing and equipotential bonding for information and communication technology (ICT) with the aim of IEC Standards Index (For Overview)Free download as PDF File.pdf), Text File.txt) or read online for free. IEC Deals with general requirements for isolation, switching and control and with the requirements for selection and erection of the devices provided to fulfil such NOTEThis standard also applies in general to protective conductors, while IEC contains further requirements for those conductors.

 Difficulté **Difficile**

 Durée **87 jour(s)**

 Catégories **Maison**

 Coût **293 EUR (€)**
