PartTest conditions for films and sheets. New version of ISO Development of ISO and ISO covers plastics as filled and unfilled molding, extrusion and cast materials, plastic film INTERNATIONAL STANDARD. Figures. Redlines? PartTest conditions for molding and extrusion plastics. Available in: en. ISO Plastics – Determination of tensile properties – Testconditions for films and sheets. The tensile test on film provides measured values about the behavior of a material under quasi-static, uniaxial, continuously increasing tensile load. Plastiques – Détermination des propriétés en AbstractThis document specifies the conditions for determining the tensile properties of plastic films or sheets less thanmm thick, based upon the general principles given in ISO NOTE For sheets greater thanmm thick, the user is referred to ISOSee ISO, ISO covers plastics as filled and unfilled molding, extrusion and cast materials, plastic film and sheets, as well as long fiber reinforced composites. PartTest conditions for films and sheets. Parts. fr. PartGeneral principles. Determination of tensile properties? PartTest conditions for isotropic and orthotropic ISO, Metallic materials – Calibration of extensometer systems used in uniaxial testing ISO, Plastics – Determination of linear dimensions of test specimens ISO, Rubber – General procedures for preparing and conditioning test pieces for physical test methods INTERNATIONAL STANDARD ISO (E) ISO, ASTM D Tensile tests on films are of great significance in the film packaging industry. Buy. Follow. Description Video Automated film testing Testing systems Plastics brochure PlasticsDetermination of tensile propertiesPartTest conditions for films and sheets (ISO) This document specifies the conditions for determining the tensile properties of plastic films or sheets less thanmm thick, based upon the general principles given in ISO zwickiLine with two test areas for tensile and compression tests: Tensile test on film to DIN EN ISO and compression test on foam material to DIN EN ISO /2 ISO, ISO, Metallic materials – Calibration of extensometer systems used in uniaxial testing ISO, Plastics – Determination of linear dimensions of test specimens ISO Significance and use.
