The symptoms in childhood relate to the age of years. As soon as a DIVA in a certain language is ready the DIVA will no longer be available on this site Young DIVA is based on the DSM criteria for ADHD. The examples are based on the common descriptions provided by patients in clinical practice DIVA asks about the presence of ADHD symptoms in adulthood as well as childhood, the chronicity of these symptoms, and significant lifetime impairments due to these symptoms. DIVA is widely used in the clinical DIVA QUESTIONNAIRE (PATIENT VERSION) Name of patient: Date of birth: Attention deficit (DSM criterion A1) Introductions: The symptoms in adulthood have to have been present for at least months. The DIVA asks about the presence of ADHD symptoms in adulthood as well as childhood, the chronicity of these symptoms, and significant lifetime impairments due to these The DIVA only asks about the core symptoms of ADHD required to make the DSM diagnosis of ADHD, and does not ask about other co-occurring psychiatric symptoms, Use of Young DIVA Young DIVA is based on the DSM criteria for ADHD. DIVA was first developed in Dutch The DIVA is the successor to DIVA, the structured Diagnostic Interview for Adult ADHD, and is based on the criteria for ADHD in DSM DIVA will be available in all languages in which DIVA has been translated. For a symptom to be ascribed to ADHD it should have a chronic trait-li The Young DIVA- The Diagnostic Interview for ADHD in young people aged years - In order to simplify the evaluation of each of these symptoms/criteria for ADHD, the interview provides a list of concrete and realistic examples. It is a structured clinical interview for ADHD in young people aged years, adjusted for young people, and modelled on the DIVA (Diagnostic Interview for ADHD in Adults), that was based on the previous DSM-IV-TR criteria. It is a structured clinical interview for ADHD in young people aged years, adjusted for young people, and modelled on the DIVA (Diagnostic Interview for DIVA QUESTIONNAIRE (PATIENT VERSION) DIVA Diagnostic Interview for ADHD in adults Introductions: The symptoms in adulthood have to have been present for at least DIVA According to the DSM-IV, ascertaining the diagnosis of ADHD in adults involves determining the presence of ADHD symptoms during both childhood and adulthood.
