The approach is that of Klein in his Erlangen programme: a geometry is a space together with a set of transformations of the space. The authors explore various geometries: affine, projective, inversive, hyperbolic and elliptic. In each case they carefully explain the key results and discuss the relationships between the geometries. This richly illustrated and clearly written undergraduate textbook captures the excitement and beauty of geometry. The authors explore various geometries: affine, projective, inversive, hyperbolic and elliptic. In each case they carefully explain the key results and discuss the relationships between the geometries. Download Geometry PDF by David A. Brannan, Matthew F. Esplen, Jeremy J. Gray. DAVID A.
