Dig Dis Sci ; (PubMed Abstract) Dimenäs E, Glise H, Hallerbäck B, Hernqvist H, Svedlund J, Wiklund I. Quality of life in patients with upper gastrointestinal symptoms the GRS (Gastrointestinal Symptom Rating Scale) is a classic questionnaire for patients with gastrointestinal disorders. There are specific instructions for the IBS version. Developed for paper administration had larger mean changes in their GRS scales than patients not showing a response to treatment (pGRS scale scores. It was concluded that the GRS is a brief, fairly comprehensive assessment of common gastrointestinal symptoms. As a result of a study in six countries, its usefulness for the evaluation of dyspeptic symptoms and reflux symptoms has been established; it has acceptable reliability and validity [] Circle the number which best represents the current severity of the THE GASTROINTESTINAL SYMPTOM RATING SCALE (GRS) IRRITABLE BOWEL SYNDROME (IBS) VERSION. This survey contains questions about how you have been The RESQ is a item reliable and valid questionnaire measuring gastroesophageal reflux disease symptoms: Heartburn (5 items), Regurgitation (4 items), Cough, difficulty The reliability and validity of the GRS are well-documented, and norm values for a general population are available. supplementary Appendix A. The Gastrointestinal Symptom Rating Scale (CeD-GRS) (*Asterisks represent the items on the Celiac Disease domains of the GRS [CeD Bibliographic reference(s) of the original questionnaire Svedlund J, Sjödin I, Dotevall G. GRS clinical rating scale for gastrointestinal symptoms in patients with irritable rating scale for gastrointestinal symptoms in patients with irritable bowel syndrome and peptic ulcer disease. The original questionnaire is an interview-based rating scale but has been modified to become a self administered questionnaire. The GRS has good reliability and Svedlund J, Sjödin I, Dotevall G. GRS clinical rating scale for gastrointestinal symptoms in patients with irritable bowel syndrome and peptic ulcer disease.
