Heavy alcohol use, toxins, some medications, and certain medical conditions can cause hepatitis. The liver is a vital organ that processes nutrients, filters the blood, and fights infections. Some people who get infected with HCV develop a short-term (acute) infection. When the liver is inflamed or damaged, its function can be affected. HCV can cause serious liver damage (cirrhosis, or buildup of scarring) if it is in the body for a long period of time. Most people with HCV do not have symptoms. Hepatitis C virus (HCV) infection, an underdiagnosed and undertreated multifaceted systemic disease, has a protracted chronic phase with hepatic and extrahepatic manifestations that affect the management of people with hepatitis C infection in different countries of the world. HCV can cause serious liver damage (cirrhosis, or buildup of scarring) if it is in the body for a long time. The recommendations herein were developed by volunteer hepatology and infectious disease experts representing AASLD and IDSA and have been peer reviewed. Hepatitis means inflammation of the liver. It covers all stages of the disease management pathway: screening, testing, diagnosis, and treatment. Integrating the diagnosis of hepatitis with diagnostic platforms and laboratory services used for other infections. Integrated service delivery of care, prevention and treatment. Hepatitis C (HCV) is a disease that is caused by a virus that affects the liver. Hepatitis is most often caused by a virus. Hepatitis C virus (HCV) infection, an underdiagnosed and undertreated multifaceted systemic disease, has a protracted chronic phase with hepatic and extrahepatic manifestations that affect the management of people with hepatitis C infection in different countries of the world. HCV can cause serious liver damage (cirrhosis, or buildup of scarring) if it is in the body for a long time. The recommendations herein were developed by volunteer hepatology and infectious disease experts representing AASLD and IDSA and have been peer reviewed. Hepatitis means inflammation of the liver. It covers all stages of the disease management pathway: screening, testing, diagnosis, and treatment. Integrating the diagnosis of hepatitis with diagnostic platforms and laboratory services used for other infections. Integrated service delivery of care, prevention and treatment. Epidemiology of hepatitis C. Hepatitis C virus. Natural history of HCV infection. Prevention of HCV infection. Screening for HCV infection. Care of patients with HCV infection. Treatment of patients with HCV infection. Cost-effectiveness of treatment. GUIDING PRINCIPLES. Hepatitis C (HCV) is a disease that is caused by a virus that affects the liver.
