Étape 1 - Launch iMovie and create new project

The first thing to do is running iMovie on your Mac computer. Then you need to click on "File" and choose "New Project" to begin a new project. After that, you can name the project and adjust some settings according to your desires.

Étape 2 - Import video clips to iMovie

In this section, add you video clips into iMovie. You can tap on "Import" > "Movies..." under the "File" option or click the "+" icon to upload your video clips that need to be combined.

Étape 3 - Combine video clips in iMovie

Once all your video clips to be merged are loaded up, drag them to the timeline one after another. You are allowed to re-arrange the sequence of these video clips as required. Now, preview the video clips and you will find they will be played as a whole video without gap.

Étape 4 - Export the combined video

In the last step, head to "File" > "Share" > "File..." to to set the export format and output quality and then save the combined video clip to the local system. There are various options for the output path. You feel free to select as your needs.
