ISO, Plastics – Preparation of glass fibre reinforced, resin bonded, low-pressure laminated plates or panels for test purposes, 1) ISO, Statistical interpretation of test results – Estimation of the mean – Confidence interval Testing Procedure. PDF •/ISO Fibre-Reinforced Plastic Composite – Determination of Apparent Interlaminar Shear Strength by Short-Beam Method About MTS TestSuite™ TW To simplify testing to ISO, MTS has developed a TestSuite™ TW test template that will set-up and run the recommended short-beam test ISO, Plastics – Standard atmospheres for conditioning and testing. The International Standard ISO was prepared by Technical Committee ISO/TC, Plastics, Subcommittee SC, Composites and reinforcement fibres. Format. English version. International Standard ISO was prepared by Technical Committee ISO/TC, Plastics, Subcommittee SC, Composites and reinforcement fibres. It cancels and replaces International Standard ISO The main changes are as follows: The scope of ISO has been extended to include all current and future ISO Printed in U.S.A. This standard was last reviewed and confirmed in Therefore this version remains current. Language. Fibre-reinforced plastic composites – Determination of apparent interlaminar This International Standard specifies a procedure for determining the apparent interlaminar shear strength of fibre-reinforced plastic composites by the short-beam method. Recommended Equipment. ISO Composites Bend Testing. The ISO pdf -reinforced plastic composites – Determination of apparent interlaminar shear strength by short-beam methodScope This International The ISO test method covers the determination of the apparent interlaminar shear strength (ILSS) of fiber-reinforced plastic composites by the short-beam method. It cancels and EN ISO ember ICS Descriptors: see ISO document. Status: Published. ISO is a testing standard designed to measure the apparent interlaminar shear strength of fiber-reinforced plastic composites with a thermoset or a thermoplastic matrix by the short-beam method Determination of apparent interlaminar shear strength by short-beam method.
