Remote sensing is a tool or technique similar to mathematics. Emphasis is on turning remote sensing data into useful spatial biophysical or socio-economic information that can be used to make isions Science. This book introduces the fundamental John R. Jensen Snippet viewRemote Sensing of the Environment: An Earth Resource Perspective John R. Jensen No preview availableRemote Sensing based on space-borne remote sensing, remote sensing of the built-environment is based exclusively on aerial photos. Using sophisticated sensors to measure the amount of electromagnetic energy exiting an object or geographic area from a distance and then extracting valuable information from the data using mathematically and statistically based algorithms is a scientific activity.
