Flavell () viewed metacognition as learners' knowledge of their own cognition, defining it as 'knowledge and cognition about cognitive phenomena'. Flavell Abstract (20/07/) This paper proposes a theoretical review of the term 'metacognition'. In another study Metacognition and Cognitive Monitoring A New Area of Cognitive Developmental Inquiry JOHN H. FLAVELL Stanford University Preschool and elementary school children were asked to study a set of items until they were sure they could recall them perfectly (Flavell, Fried-richs, & Hoyt,). The older subjects studied for a while, said they were ready, and usually were, that is, they showed perfect recall. Flavell () viewed metacognition as learners' knowledge of their own cognition, defining it as 'knowledge and cognition about cognitive phenomena' (p.) Studies suggest that young children are quite limited in their knowledge about cognitive phenomena—or in their metacognition—and do relatively little monitoring of their own memory, comprehension, and other cognitive enterprises. Metacognitive knowledge is one's stored knowledge or beliefs about oneself and others as cognitive agents, about tasks, about actions or strategies, and about how Metacognitive experiences are conscious cognitive or affective experiences that occur during the enterprise and concern any aspect of it—often, how well it is going. Flavell metacognition The term 'metacognition' was introduced by John Flavell in the early s based on the term 'metamemory' previously conceived by the same scholar (Flavell). It was introduced by John Flavell in the early s based on the term 'metamemory' Preschool and elementary school children were asked to study a set of items until they were sure they could recall them perfectly (Flavell, Friedrichs, & Hoyt,).
