The only physical principles we require the reader to know are: (i) Newton's three laws; (ii) that the kinetic energy of a particle is a half its mass times the magnitude of its velocity squared; and (iii) that There is also a brief introduction to path integrals and their connection with Hamilton's principle, and the relation between the Hamilton–Jacobi equation of mechanics, the eikonal equation of optics, and the Schrödinger equation of quantum mechanics. It also took the voyager spacecraft to the far reaches of the solar system.
