Palabras clave: Sarcoma uterino, tumores mesodérmicos En general, el leiomiomasarcoma uterino es un tumor genéticamente inestable que demuestra anomalías cromosómicas estructurales complejas y una regulación de genes diagnóstico y estadificación, manejo del leiomiomasarcoma (LMS), sarcoma estromal endometrial (ESS) y sarcoma uterino indiferenciado (UUSs), adenomasarcoma, . A detailed understanding of the diagnosis and treatment of uterine sarcoma in the real world is required due to its low incidence, high malignancy, lack of specific Uterine sarcoma is a rare cancer that starts in the muscle and supporting tissues of the uterus (womb). While high-grade ESSs (HG-ESS) are generally highly aggressive, low-grade ESSs (LG-ESSs) have an indolent behavior RESUMEN. T papel de la RadloteRapla en saRcoma uteRlno El papel de la radioterapia no está claro. Se conoce que disminuye las recaídas locales, pero no tiene e Background: Uterine carcinosarcoma (UCS) is rare and highly aggressive malignant tumor belonging to mixed epithelial and mesenchymal tumors and classified as high-grade endometrial carcinoma. The uterus is a hollow organ, usually about the size The most frequent subtypes are leiomyosarcoma (LMS), followed by endometrial stromal sarcoma (ESS) and undifferentiated uterine sarcoma (UUS). el sarcoma uterino morceladoPropósito y objetivosDebido a la heterogeneidad biológica de los sarcomas de útero (incluidos los carcinosarcomas) y la controversia sobre el manejo óptimo de los casos individuales, es necesaria una GPC para mejorar la calidad de la atención; que tienen como objetivo proporcionar información sobre el Etapa I: Sarcoma confinado al cuerpo uterino (52%). UCS is more prone to metastasis, especially in the lymph nodes, and% of the diagnostics show advanced process and worse treatment results After excluding carcinosarcoma, leiomyosarcoma has become the most common subtype of uterine sarcoma even though it accounts for only 1%–2% of uterine malignanciesApproximatelyin every smooth muscle tumors of the uterus is a leiomyosarcomalt occurs in women overyears of age who usually present with abnormal vaginal bleeding Etapa III: Sarcoma confinado a la pelvis (37%). Histological grade deeply impacts on prognosis and clinical behavior. La presente revisión analiza estudios clínico-patológicos, factores pronósticos y el manejo actual de sarcomas uterinos. Etapa II: Sarcoma confinado a cuerpo y cérvix (66%). Etapa IV: Sarcoma extrapélvico (0%). About the uterus.
