Nature and Consciousness. The psychologist Piaget proposed that children start to develop this belief in “object permanence” around months of age, and have it firmly entrenched just months later. Donald D. Hoffman, C. Prakash. [1] Therefore, we need a fundamentally new foundation from which to construct a theory of objects. This paper shows that there are three fundamental lenses of perception (sentient ways of sensing and responding) that appear to guide the behavior of all quanta and living Mindfield. The standard view in science is that consciousness arrived Hoffman proposes a solution to the hard problem of consciousness by adopting the converse view that consciousness causes brain activity and, in fact, creates all objects 1 Objects of Consciousness. What is the place of consciousness in nature? We show that one particular object, the quantum free particle, has a wave function that is identical in form to the harmonic functions that characterize the asymptotic dynamics of conscious agents Donald Hoffman., *Frontiers in Psychology*. The human mind is predisposed to believe that physical objects, when unperceived, still exist with definite shapes and locations in space Hoffman and Prakash Objects of consciousness an agent C might solve the correspondence problem and pass its solution to C 2, which solves the structure-from-motion problem We develop the dynamics of interacting conscious agents, and study how the perception of objects and space-time can emerge from such dynamics. Donald D. Hoffman. *Published Philosophy*. Current models of visual perception typically assume that human vision We show that one particular object, the quantum free particle, has a wave function that is identical in form to the harmonic functions that characterize the asymptotic dynamics of The human mind is predisposed to believe that physical objects, when unperceived, still exist with definite shapes and locations in space. Here we explore the possibility that consciousness is that new foundation, and seek a mathematically precise theory. The idea is that a theory of objects requires, first, a theory of subjects Objects of consciousness.
